Introduction to Thermodynamics.  
Thermodynamics is the study of the  
energy, principally heat energy, that  
accompanies chemical or physical  
changes. Some chemical reactions  
release heat energy; they are called  
exothermic reactions, and they have a  
negative enthalpy change. Others  
absorb heat energy and are called  
endothermic reactions, and they have  
a positive enthalpy change.

Introduction of Thermodynamics. The study of changes in energy associated with physical and chemical reaction is called as thermodynamics. In general, it is the study of effect of work, heat and energy on a system. When changes in energy are studied from chemistry point of view, it is called as chemical thermodynamics.

Define the first law of thermodynamics. Describe how conservation of energy relates to the first law of thermodynamics. Identify instances of the first law of thermodynamics working in everyday situations, including biological metabolism. Calculate changes in the internal energy of a system, after accounting for heat transfer and work done.

## 1.1 What it's All About

Introduction. A description of any thermodynamic system employs the four laws of thermodynamics that form an axiomatic basis. The first law specifies that energy can be exchanged between physical systems as heat and work. The second law defines the existence of a quantity called entropy, that describes the direction, thermodynamically, that a system can evolve and quantifies the state of order ...

Let us break the word thermodynamics into two words, thermo and dynamics.

‘Thermo’ stands for heat while

‘dynamics’ is used in connection with a mechanical motion which involves

‘work’. Therefore, Thermodynamics is the branch of physics that deals with the relationship between heat and other forms of energy.

Thermodynamics is often called the science of energy. This designation steals accomplishments from other sciences, and diminishes accomplishments of thermodynamics. Rather, thermodynamics is the science of entropy. Entropy plays the leading role in thermodynamics.
